Limitations

Limitations

AECOM Infrastructure & Environment UK Limited (hereafter referred to as "AECOM") has prepared this Report for the sole use of Rushcliffe Borough Council (RBC) in accordance with the Agreement under which our services were performed. No other warranty, expressed or implied, is made as to the professional advice included in this Report or any other services provided by AECOM. This Report is confidential and may not be disclosed by the Client or relied upon by any other party without the prior and express written agreement of AECOM.

The information contained in this Report is based upon information provided by others and upon the assumption that all relevant information has been provided by those parties from whom it has been requested and that such information is accurate. Information obtained by AECOM has not been independently verified by AECOM, unless otherwise stated in the Report.

The methodology adopted and the sources of information used by AECOM in providing its services are outlined in this Report. The work described in this Report is based on the conditions encountered and the information available during the said period of time. The scope of this Report and the services are accordingly factually limited by these circumstances.

AECOM disclaim any undertaking or obligation to advise any person of any change in any matter affecting the Report, which may come or be brought to AECOM's attention after the date of the Report.

Certain statements made in the Report that are not historical facts may constitute estimates, projections or other forward-looking statements and even though they are based on reasonable assumptions as of the date of the Report, such forward-looking statements by their nature involve risks and uncertainties that could cause actual results to differ materially from the results predicted. AECOM specifically does not guarantee or warrant any estimate or projections contained in this Report.

Unless otherwise stated in this Report, the assessments made assume that the sites and facilities will continue to be used for their current purpose without significant changes.

Executive Summary

In June 2016, Rushcliffe Borough Council appointed AECOM to undertake a Landscape and Visual Analysis ('LVA') of potential development sites. The LVAs will be used along with other information to make decisions about which sites should be allocated for development in the second part of the Local Plan. The impact that development will have on the landscape and on visual amenity are important factors to be weighed in the balance; therefore a systematic professional assessment of these impacts needs to be undertaken in order to fully understand the consequences of development on each site and to identify any emerging opportunities to mitigate these.

The LVAs assess a number of sites which are considered 'reasonable alternatives' for allocation. In total, 100 sites have been assessed. Each site has been assessed for both its impact on the landscape and its visual impact; reflected in a score for each which is combined to give an overall score of sensitivity. Equal weighting has been given to landscape and visual sensitivity and the elements of susceptibility and value which are combined to establish them.

A full Landscape and Visual Impact Assessment (LVIA) suitable for a planning application, however, has not been undertaken because a full LVIA needs to respond to a specific development proposal, rather than just a general development type within a red line. However, the scale of work undertaken in this report is of sufficient detail to inform the preparation of the second part of the Local Plan.

For each site, findings are presented in the form of an A3 pro-forma of landscape and visual sensitivity scoring based on a range of criteria with an accompanying plan which illustrates the characteristics and setting of the site and any recommendations for mitigation. The mitigation recommendations are provided for guidance to developers and have not been factored into the assessments of site sensitivity. The pro-forma outputs and data sheets are included as Appendix A, organised by settlement.

The guidance/methodology relating to completion of the pro-formas is included as Appendix B.

The relative ranking of sites, based on the sensitivity scoring, is presented in a series of spreadsheets and the detail of the individual assessments is contained in the pro-forma and accompanying data sheet.

Introduction

Rushcliffe Borough Council adopted the Local Plan Part 1: Core Strategy in December 2014. This plan sets the overarching development strategy and allocates a number of large strategic sites.

Following on from the Core Strategy, the Council is preparing the second part of its Local Plan known as the Land and Planning Policies. This document will include more detailed policies for use in assessing planning applications and will also allocate a number of non-strategic sites.

A Landscape Character Assessment ('LCA') was published for the county of Nottinghamshire in 2009 by Nottinghamshire County Council. The LCA has assessed the condition and character of larger parcels of land and divided the area into a number of Draft Policy Zones. These are areas of similar landscape character with a unique sense of place. The LCA, however, is a strategic assessment rather than a field by field, or site by site, assessment and it is therefore necessary to supplement that work in order to derive the evidence base for the allocation of development sites.

In order to make decisions about which sites should be allocated for future development, it will be necessary to consider a number of different factors. These factors include the impact on the landscape and the visual impact resulting from development of the site. Impacts on landscape and on visual amenity are important factors to be weighed in the balance; therefore a systematic professional assessment of these impacts needs to be undertaken in order to fully understand the consequences of development on each site and to identify any emerging opportunities to mitigate these.

The LVAs assess a number of sites which are considered by Rushcliffe Borough Council to be 'reasonable alternatives' for allocation. In total 100 sites have been assessed. In addition, opportunities to potentially mitigate some of the effects of development on each site have been identified and mapped wherever possible.

Each site has been visited by a pair of Landscape Architects and assessed for both its landscape and visual sensitivity using a methodology based on the 'Guidelines for Landscape and Visual Impact Assessment' published by the Landscape Institute and the Institute for Environmental Management & Assessment in 2013. A full Landscape and Visual Impact Analysis (LVIA) suitable for a planning application, however, has not been undertaken because a full LVIA needs to respond to a specific development proposal, rather than just a general development type within a red line. However, the scale of work undertaken in this report is of sufficient detail to inform the preparation of part 2 of the Local Plan.

For each site findings are presented in the form of an A3 pro-forma with accompanying plan which illustrates the characteristics and setting. The pro-forma outputs and plans are grouped by settlement in Appendix A and are ordered by their site reference numbers.

Methodology Outline

The methodology used for this assessment follows that was used successfully for nearby Gedling Borough Council in a similar exercise. This methodology is derived from and conforms to GLVIA3, which is the current guidance used by professionals in the assessment of landscape and visual effects.

The assessment has been undertaken using a combination of the "Living Landscapes Project" methodology (2002), which formed the basis for the Nottinghamshire LCA, and "Guidelines for Landscape and Visual Impact Assessment" (2013), referred to as GLVIA3. Both rely on professional judgment, and a structured approach to assessment, based on evidence.

The proposed development site analysis represents a more fine grained landscape character assessment within the hierarchical context of the Nottinghamshire Landscape Character Assessment 2009 and also considers the visual aspects of potential development and opportunities for mitigation of impacts of development.

Key characteristics of landform, settlement pattern, land cover, tree cover are assessed in relation to the Site, Study Area and Policy Zone. In accordance with GLVIA3 methodology, the Study Area is defined primarily by the Zone of Theoretical Visibility (ZTV) and professional judgment. The assessment relates to sensitivity of the Study Area defined by the ZTV mapping. The ZTV mapping is based on new built development assumed to be 7m in height (a two storey house) within the development site and takes into consideration existing woodland within the model (assumed to be 13m high) and existing built development (assumed to be 7m high).

A scoring system has been used for each part of the analysis leading to an overall score. The basis of the scoring has been set out in a pro-forma sheet and applies to the development of the site before any mitigation is implemented. The overall score is the sum total of each of the scores for the categories of Landscape Value, Landscape Susceptibility, Visual Value, and Visual Susceptibility. In accordance with the GLVIA3 methodology, susceptibility and value are the key determinants of sensitivity for both landscape and visual effects.

- Landscape Susceptibility + Landscape Value =Landscape Sensitivity
- Visual Susceptibility + Visual Value =Visual Sensitivity
- Landscape Sensitivity + Visual Sensitivity = Overall Score

Landscape Value is defined as the relative value that is attached to landscape by society; Landscape Susceptibility is defined as the ability of the landscape to accomodate a type of development – in this case housing and mixed use - without undue negative consequences; Landscape Sensitivity is defined as the combined judgment of value and susceptibility.

Visual Value is defined as the relative value that is attached to views by visual receptors; Visual Susceptibility is defined as the ability of the visual receptors to accommodate the specific development type – in this case housing and mixed use - without undue negative consequences; Visual Sensitivity is defined as the combined judgment of value and susceptibility.

Judgments of Landscape Value, Landscape Susceptibility, Visual Value and Visual Susceptibility are all equally important when assessing a site and therefore are all equally weighted, as are judgments of Landscape Sensitivity and Visual Sensitivity. In this assessment, scoring is applied on a description system of High / Medium / Low and allocated a numerical value. This number enables each category to be weighted equally when feeding through into the overall score for the site. The overall site score is used for ranking the sites only and provides the relative sensitivity of each site when gauged against the others in this assessment.

This allows sites to be compared and contrasted with one another in landscape and visual terms. The scores and written analysis will be used by the Council as part of a separate assessment for the identification of sites to allocate for future housing development. This assessment will balance all of the relevant factors, not just landscape and visual sensitivity.

On a national scale, Rushcliffe's landscape is of relatively low quality - there are few national designations and the landscape tends to be only of local significance. Given this general low quality, assessing the sites on an absolute basis (e.g. high value landscapes having national designations) is considered to be inappropriate. Consideration of sites relative to other areas of the borough results in an easier distinction between sites of higher and lower sensitivity within a local context.

Detailed guidelines for making judgments in completing the pro-formas are provided in Appendix B. Completion of the pro-formas was undertaken by landscape architects working in pairs in order to enable reasoned discussion and consistency of judgment and to avoid individual bias.

Analysis of LVA Results

As set out above and explained in the methodology in Appendix B, each of the 100 potential development sites has been allocated a combined score based on landscape and visual sensitivity. This allows relative ranking of all of the sites within Rushcliffe Borough but also ranking by settlement. The data behind the scoring is recorded on the pro-forma for each site accompanied by the mapping sheet which indicates;

- Site location
- A series of photographs
- A Zone of Theoretical Visibility map
- A map with an aerial image of the site and its surroundings
- A map which shows landscape and planning designations relevant to the assessment, LCA policy zones, photograph locations, key views into the site and recommendations for mitigation.

Indicative recommendations for mitigation of potential landscape and visual effects have been identified on a site by site basis, but not factored into the assessment of sensitivity. The assessments of landscape and visual sensitivity therefore excludes mitigation.

The relative ranking of all of the sites is presented in Figure 1 "Relative Ranking of Development Sites". The sites are ranked from 1 to 99 with the top site, number 1, being the site which has fewest landscape and visual constraints to housing development. Graphically, the sites most suitable for development have a predominance of green shading, those with more constraints, whether landscape or visual include amber shading, whilst the sites least suitable for housing development include a predominance of red shading.

The use of this traffic light colouring of green for go, amber for caution and red for stop allows an immediate understanding of sensitivity zones between sites and across the Borough.

In addition to the overall relative ranking of sites in relation to each other, across Rushcliffe Borough, the assessment also allows an understanding of relative sensitivities by settlement as set out in Figures 2 to 15.
